

The Diamon-Fusion Difference

Homeowners, designers, architects and developers around the world are requesting Diamon-Fusion low-maintenance coating on their glass and glass-like surfaces. The patented, easy-to-clean formula has been applied to millions of shower doors worldwide and used on prestigious landmarks and commercial buildings globally.

Revitalizer™ is not required to maintain the Diamon-Fusion warranty, as long as basic care instructions are followed.

Diamon-Fusion protective coating transforms ordinary glass into high-performing solar panels that last longer and improve photovoltaic performance.

Easy-to-Clean Solar Panel Protection

Diamon-Fusion® keeps your solar panels performing like-new for longer

Why Diamon-Fusion?

Solar panel owners worldwide have discovered Diamon-Fusion's low maintenance coating to help protect their investment. Solar panels treated with Diamon-Fusion become water repellent resulting in:

Increased energy efficiency

Maximize your solar panels energy output, while improving the lifespan of the system by treating the surface with Diamon-Fusion.

Eco-friendly/UV Resistant

Diamon-Fusion is 100% optically clear, UV resistant (won't break down in sunlight) and promotes a greener environment by eliminating the need for chemical cleaners.

Protect your investment

By chemically bonding with the silica in the glass, Diamon-Fusion transforms ordinary glass into high-performing solar panels that last longer and improve performance.

Protection Guaranteed

Diamon-Fusion chemically bonds to the glass transforming it into a high performance, hydrophobic surface that protects against corrosion, staining and etching. Once the Diamon-Fusion coating comes into contact with the silica in the glass, an invisible, ultra-thin protective layer is formed, creating a permanent bond.

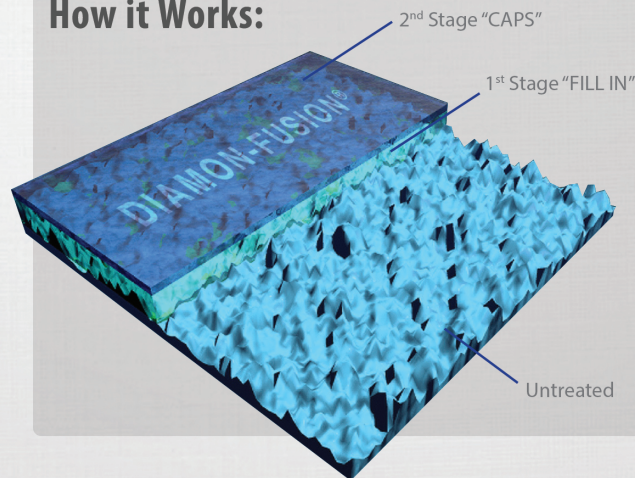

Once applied to the surface, Diamon-Fusion will also guard against environmental pollutants, leaching from minerals, and weathering.

Patented Technology

Glass is a naturally porous surface that allows hard water and mineral contaminants to easily penetrate the surface and cause unwanted staining and corrosion. Diamon-Fusion seals the surface of the glass for longer-lasting beauty, with far less maintenance.

Its patented, two-step technology creates a covalent bond by filling in the microscopic ridges and is then "capped" and sealed to enhance the smoothness of the surface.

How it Works:

Featured Benefits

- ◆ Water and environmental stain resistant
- ◆ Requires less frequent cleanings
- ◆ Scratch and impact resistant
- ◆ Increased energy efficiency
- ◆ 100% optically clear and UV resistant
- ◆ Lifetime warranty on residential solar panels
